

NAME

`t1lint` – check a PostScript Type 1 font for correctness

SYNOPSIS

`t1lint font [font...]`

DESCRIPTION

T1lint checks PostScript Type 1 font programs for correctness. Any errors or variances from the specification are reported to standard error. If there are no errors, the command prints nothing. It exits with status 0 if all fonts were OK, and status 1 otherwise. If no input files are supplied, `t1lint` reads a font from the standard input.

OPTIONS

-q, --quiet

Do not generate any error messages. The only output will be the exit status.

-h, --help

Print usage information and exit.

-v, --version

Print the version number and some short non-warranty information and exit.
