

**NAME**

`getafm` – create an AFM file for a PostScript font.

**SYNOPSIS**

**getafm** *FontName* > *output.ps*

**DESCRIPTION**

*Getafm* generates a PostScript file which prints an AFM file for a font to the printer's output channel. The output of *getafm* should be sent to a printer, or to GhostScript. For example,

```
getafm Times-Roman | gsnd - >Times-Roman.afm
```

**AUTHOR**

Robert Joop (rj@rainbow.in-berlin.de), Angus Duggan

**TRADEMARKS**

**PostScript** is a trademark of Adobe Systems Incorporated.

**BUGS**

Kerning information is not generated by *getafm*; it is best to use original AFM files if possible.
