

zebra-goodies — Easy Notes Taking*

Ruini Xue[†]

Released 2026/02/27

Abstract

The zebra-goodies package provides a lightweight set of macros for inline note-taking during document writing. It is designed to be simple and practical for both solo and collaborative workflows. Five built-in commands—`\todo`, `\comment`, `\note`, `\fixed`, and `\placeholder`—cover common use cases out of the box, and `\zebranewnote` lets you define additional note types as needed. Notes are automatically numbered per type, marked with a `\dbend` symbol in the nearest margin, and summarised in a table at the end of the document. Passing the `final` option suppresses all notes for production output.

*This file describes version 0.9.1, last revised 2026/02/27.

[†]E-mail: xueruini@gmail.com

1 Introduction

Many note-taking and to-do packages exist for L^AT_EX, but most fall into one of two traps: they either offer an overwhelming feature set that tries to cover every conceivable use case, or they clutter the margins with oversized colourful boxes and arrows that make the document hard to read.

zebra-goodies takes a different approach. It aims to be *simple*—intuitive commands with only the arguments you actually need—and *good enough*—notes appear inline with a small visual cue in the margin, keeping the document readable while still making annotations easy to spot. Each note type is automatically numbered, and a summary table at the end of the document lists how many notes of each type remain, serving as a gentle reminder to address them before the final version.

The package requires L^AT_EX 2022-06-01 or later.

2 Installation

The package is supplied in dtx format and as a pre-extracted zip file. The latter is the most convenient option for most users: simply unzip it into your local texmf directory and run `texhash` to update the file-name database, or unzip the files directly into your working directory. To unpack the dtx yourself, run `tex zebra-goodies.dtx` to extract the package, or `latex zebra-goodies.dtx` to extract it and typeset the documentation at the same time.¹

3 Using the package

Load the package in the preamble with any desired options. Options are described in Section 3.3.

```
\usepackage[<options>]{zebra-goodies}
```

3.1 Notes Macros

```
\todo \todo[<name>]{<note content>}
```

The primary command provided by zebra-goodies is `\todo`. It inserts an inline note in the current paragraph, typeset in a predefined colour and marked with a `\dbend` symbol in the nearest margin. The mandatory `<note content>` describes the task; the optional `<name>` specifies who is responsible for addressing it, which is particularly useful during collaborative writing.

```
A very simple example of a todo note \todo{how should we go to the lake?},  
and the result will be presented right below the code snippet. Please  
compare the code and the result.
```

A very simple example of a todo note [TODO 1: how should we go to the lake?], and the result will be presented right below the code snippet. Please compare the code and the result.

¹Running `latexmk zebra-goodies.dtx` is even more convenient as it handles multiple compilation passes automatically.

The following example shows how to assign notes to specific people. Notes of the same type are numbered sequentially, and assignees are prefixed with @.

```
Another one with an assignee is like \todo[tom]{you should buy the ticket},
and you will find the same type of notes are numbered. And the assignees are
being \texttt{@}-ed right before the text. And another one with many
assignees \todo[lucy,jessie]{prepare the foo}.
```

- 2 Another one with an assignee is like [TODO 2@tom: you should buy the ticket], and you will find the same type of notes are numbered. And the assignees are being @-ed right before the text. And another one with many assignees [TODO 3@lucy,jessie: prepare the foo].

Because notes are set as inline text, they work inside moving arguments such as `\section` and `\caption` without issues.

```
\section{Introduction\todo[jerry]{please figure out a better name}}
\begin{figure}
  \centering
  \caption{Speed vs distance. \todo[need to insert the figure]}
\end{figure}
```

```
\note \note[<name>]{<note text>}
```

```
\comment \comment[<name>]{<comment text>}
```

```
\fixed \fixed[<name>]{<fixed text>}
```

```
\placeholder \placeholder[<name>]{<placeholder text>}
```

These commands share the same syntax and behaviour as `\todo`; they differ only in name and colour, providing semantic distinction for different annotation purposes.

If any of these short names conflicts with another loaded package, zebra-goodies will *not* overwrite the existing definition. Instead, it issues a warning and you should use the prefixed form (e.g. `\zebracomment` instead of `\comment`). The following example mixes several note types. Note that `\zebracomment` is used here because `\comment` is already defined by l3doc.

```
A \note{how should we go to the lake?} and a
\zebracomment[tom]{you should buy the ticket}. Multiple assignees
work too: \placeholder[lucy,jessie]{prepare the foo}. Mark resolved items
with \fixed[John]{good job!}. Notes of different types are numbered
independently: \todo{a new todo} and (let's add more words to make the next
note in a new line otherwise the symbols will overlap) \note[who]{another note}.
```

- 1 A [NOTE 1: how should we go to the lake?] and a [COMMENT 1@tom: you should buy the ticket].
 1 Multiple assignees work too: [PLACEHOLDER 1@lucy,jessie: prepare the foo]. Mark resolved
 1 items with [FIXED 1@John: good job!]. Notes of different types are numbered independently:
 4 [TODO 4: a new todo] and (let's add more words to make the next note in a new line otherwise
 2 the symbols will overlap) [NOTE 2@who: another note].

`\zebratodo` `\zebratodo[<name>]{<note text>}`

Each built-in note command has a prefixed alias that is always available, regardless of name conflicts. If `\todo` is already taken by another package, use `\zebratodo` instead. The same applies to all other types.

`\zebranote` `\zebranote[<name>]{<note text>}`

`\zebracomment` `\zebracomment[<name>]{<comment text>}`

`\zebrafixed` `\zebrafixed[<name>]{<fixed text>}`

`\zebraplaceholder` `\zebraplaceholder[<name>]{<placeholder text>}`

`\zebranewnote` `\zebranewnote{<note name>}{<xcolor name>}`

Creates a new note type. The *<note name>* becomes the command name (e.g. passing `question` creates `\question` and `\zebraquestion`), and *<xcolor name>* sets its colour. The colour must be a named colour already known to `xcolor`; define it with `\definecolor` or `\colorlet` beforehand if needed.

```
\colorlet{mycyan}{cyan}
```

```
\zebranewnote{question}{mycyan}
```

```
When it moves to the next step, we should be fine. \question[who]{what's this?}
```

When it moves to the next step, we should be fine. [`QUESTION 1@who: what's this?`]

3.2 Two-column Support

In `twocolumn` documents, the `\dbend` symbol is automatically placed on the nearest margin: left margin for the left column, right margin for the right column. No special configuration is needed. The following standalone example is extracted from this `dtx` file and compiled automatically during the build.

```
\documentclass[twocolumn,a4paper]{article}
\usepackage[margin=2cm]{geometry}
\usepackage{zebra-goodies}
\usepackage{lipsum}
\pagestyle{empty}
\begin{document}
\section{Demo name\comment{revise the name}}
\lipsum[1] \todo[alice]{revise the introduction}

\lipsum[2] \note[bob]{add a reference here}
\lipsum[3] \fixed[carol]{looks good now}
\lipsum[4] \todo[dave]{needs more data}
```

```

\lipsum[5] \placeholder[eve]{insert figure}

\lipsum[6] \note[frank]{check the numbers}

\lipsum[7] \comment[tom]{is it you, jerry?}

\lipsum[8] \fixed[heidi]{typo corrected}

You can place \todo[judy]{summarise the findings} anywhere. \lipsum[9][10-11]
\end{document}

```

The rendered result:

You can place [TODO 3@judy: summarise the findings] anywhere. Curabitur tristique arcu eu metus. Vestibulum lectus.

.....

Zebra Notes

Type	Number
todo	3
fixed	2
comment	2
note	2
placeholder	1

This also works correctly in combination with the `twoside` option.

3.3 Package Options

`draft`
`final` These two options are complementary. By default `draft` is active: all notes are typeset inline and a summary table is appended at the end of the document. Setting `final` (or `draft=false`) suppresses all notes and the summary table, producing clean output ready for distribution.

`microtype` Controls whether the `microtype` package is loaded. Default: `true`.

4 Predefined Colours

The package also defines a small palette of named colours intended for use with `pgfplots` or other drawing packages:

- `zebrablue`
- `zebrared`
- `zebrayellow`
- `zebrapurple`
- `zebragreen`

5 Implementation

```
1 <*package>
2 <@@=zebra_goodies>
   Version data to start with.
3 \ProvidesPackage{zebra-goodies}
4 [2026/02/27 0.9.1 Easy Notes Taking]
```

5.1 Package options

Two package options `draft` and `microtype` are created using the kernel key–value interface available since L^AT_EX 2022-06-01.

```
5 \DeclareKeys[zebra]{
6   draft .if          = zebr@draft,
7   draft .default:n = true,
8   final .code       = \zebr@draftfalse,
9   microtype .if      = zebr@microtype,
10  microtype .default:n = true,
11 }
12 \SetKeys[zebra]{draft, microtype}
13 \ProcessKeyOptions[zebra]
14 \ifzebr@microtype
15   \RequirePackage{microtype}
16 \fi
17 \RequirePackage{xcolor}
18 \RequirePackage{marginnote}
19 \@ifundefined{dbend}{\RequirePackage{manfnt}}{}
```

5.2 Main notes macros

Various helper macros are defined before reaching out to the `\todo` commands.

Place the margin note on the nearest margin. Takes two arguments: `#1` for the left margin (number then symbol) and `#2` for the right margin (symbol then number), so the symbol always sits closest to the text column. In twocolumn mode, `\marginpar`'s optional argument selects the left-margin variant automatically. In single-column mode, `\marginnote` is used with the right-margin variant as default.

```

20 \newcommand*\zebr@marginnote}[2]{%
21   \if@twocolumn
22     \ifinner
23       \marginnote{#2}%
24     \else
25       \marginpar[{\makebox[\marginparwidth]{#1}}]{\makebox[\marginparwidth]{#2}}%
26     \fi
27   \else
28     \marginnote{#1}%
29   \fi
30 }
```

Then, two meta macros are used to create new types of note.

```

31 \def\zebr@note{%
32   \ifzebr@draft\expandafter\zebr@note@\else\expandafter@gobblefour\fi}
   \zebr@note@ is the core macro to typeset the note. The syntax is:
   \zebr@note@{<note name>}{<color>}{<assignee>}{<note text>}
33 \DeclareRobustCommand{\zebr@note@}[4]{%
34   \expandafter\stepcounter{zebr@num@#1}%
35   \zebr@marginnote
36     {\textcolor{#2}{%
37       {\bfseries\expandafter\csname thezebr@num@#1\endcsname}\kern1pt\dbend}}
38     {\textcolor{#2}{%
39       \dbend\kern1pt{\bfseries\expandafter\csname thezebr@num@#1\endcsname}}}%
40   \textcolor{#2}{[\colorbox[gray]{0.97}{%
41     \textcolor{#2!70!black}{%
42       \textsc{\MakeLowercase{\MakeUppercase#1}}
43       {\expandafter\csname thezebr@num@#1\endcsname}\texttt{#3}:}} #4]}}
44 \newcommand{\zebr@prepend}[2]{%
45   \ifx\relax#2\relax\relax\else#1#2\fi}
```

`\zebr@newnote` All note types are created with `\zebr@newnote`.

```

46 \def\zebr@noteslist{}
47 \def\zebr@newnote#1#2{%
48   \g@addto@macro\zebr@noteslist{,#1}%
49   \expandafter\newcounter\expandafter{zebr@num@#1}
50   \expandafter\gdef\csname zebr@color@#1\endcsname{#2}
51   \expandafter\NewDocumentCommand\csname zebra#1\endcsname{0{}m}{%
52     \zebr@note{#1}{#2}{\zebr@prepend{@}{#1}}{#2}}
53   \@ifundefined{#1}{%
54     \expandafter\def\csname #1\endcsname{\csname zebra#1\endcsname}}{%
55     \PackageWarning{zebra}{'\textbackslash{#1}' has been taken.
56       Use '\textbackslash{zebra#1}' instead.}}
```

(End of definition for `\zebr@newnote`. This function is documented on page 4.)

```

\todo They are defined with \zebranewnote. The colors are picked up from the default ones
\note from xcolor.
\fixed 57 \zebranewnote{todo}{purple}
\comment 58 \zebranewnote{fixed}{teal}
\placeholder 59 \zebranewnote{comment}{blue}
60 \zebranewnote{note}{violet}
61 \zebranewnote{placeholder}{gray}

```

(End of definition for \todo and others. These functions are documented on page 2.)

5.3 Print summary at end of the document

A summary table is inserted automatically at the end of the document. Each note type with at least one instance is listed with its colour and count.

```

62 \def\zebr@listnotes{%
63   \ifzebr@draft\zebr@listnotes@\fi}
64 \def\zebr@listnotes@{%
65   \def\zebr@tbl@body{}
66   \edef\zebr@tbl@list{\expandafter\@gobble\zebr@noteslist}
67   \@for\zebr@tbl@type:=\zebr@tbl@list\do{%
68     \expandafter\ifnum\expandafter\value\expandafter{zebr@num@\zebr@tbl@type} > 0%
69     \def\zebr@tbl@cnt{\expandafter\csname thezebr@num@\zebr@tbl@type\endcsname}
70     \edef\zebr@tbl@row{\noexpand\textcolor{%
71       \expandafter\csname zebr@color@\zebr@tbl@type\endcsname}{\zebr@tbl@type}%
72       \noexpand & \zebr@tbl@cnt\noexpand\\}
73     \expandafter\g@addto@macro\expandafter\zebr@tbl@body\expandafter{\zebr@tbl@row}%
74     \fi}
75   \ifx\zebr@tbl@body\@empty\else%
76     \noindent\dotfill\par
77     \section*{Zebra Notes}
78     \par \medskip
79     \begin{center}
80       \begin{tabular}{lr}
81         \hline
82         \textbf{Type} & \textbf{Number} \\ \hline
83         \zebr@tbl@body
84         \hline
85       \end{tabular}
86     \end{center}
87   \fi}
88 \AtEndDocument{\zebr@listnotes}

```

5.4 Personal Colors

Several colors are defined for plots.

```

89 \definecolor{zebrablue}{HTML}{4F81BD}
90 \definecolor{zebrared}{HTML}{C0504D}
91 \definecolor{zebragreen}{HTML}{9BBB00}
92 \definecolor{zebrapurple}{HTML}{9F4C7C}
93 \definecolor{zebrayellow}{HTML}{D9CD2E}
94 \definecolor{zebragreen2}{HTML}{00E000}
95 \end{package}

```

5.5 Two-column demo

A standalone two-column document used to generate the demo figure included in the documentation. It is extracted automatically by docstrip and compiled during the build.

```

96 <*demo-twocol>
97 \documentclass[twocolumn,a4paper]{article}
98 \usepackage[margin=2cm]{geometry}
99 \usepackage{zebra-goodies}
100 \usepackage{lipsum}
101 \pagestyle{empty}
102 \begin{document}
103 \section{Demo name\comment{revise the name}}
104 \lipsum[1] \todo[alice]{revise the introduction}
105
106 \lipsum[2] \note[bob]{add a reference here}
107 \lipsum[3] \fixed[carol]{looks good now}
108 \lipsum[4] \todo[dave]{needs more data}
109
110 \lipsum[5] \placeholder[eve]{insert figure}
111
112 \lipsum[6] \note[frank]{check the numbers}
113
114 \lipsum[7] \comment[tom]{is it you, jerry?}
115
116 \lipsum[8] \fixed[heidi]{typo corrected}
117
118 You can place \todo[judy]{summarise the findings} anywhere. \lipsum[9] [10-11]
119 \end{document}
120 </demo-twocol>

```
